TEXTILE:

A type of material composed of natural or synthetic fibers. Types of textiles include animal-based material such as wool or silk, plant-based material such as linen and cotton, and synthetic material such as polyester and rayon. Textiles are often associated with the production of clothing.

Historically, Pakistan's textile industry and clothing sector has always been a major contributor to the foreign exchange earner and still contributes about 55% to the total export proceeds.

The Economist reports that Pakistan is the 4th largest producer of cotton in the world and the 6th largest importer of raw cotton, the 3rd largest consumer of cotton, and the 1st largest exporter of cotton yarn. Over 1.3 million farmers, out of total of 5 million are involved in cultivation of this crop.

Textile exports in 1999 were \$5.2 billion and rose to become \$10.5 billion by 2007. Textile exports managed to increase at a very decent growth of 16% in 2006. In the period July 2007 – June 2008, textile exports were US\$ 10.62 Billion. Textile exports share in total export of Pakistan has declined from 67% in 1997 to 55% in 2008, as exports of other non-textile sectors grew.
